

## **Technical Rescue Systems LLC**

### **Company Profile**

#### **Global Training - Office Location**

Technical Rescue Systems LLC is a global training company founded in 1986, located 60 miles north of Denver Colorado in Fort Collins.

Address: 1612 Laporte Ave. Suite 10, Fort Collins, CO 80521

We offer both... training at your location... or ours...

#### **Founded**

Technical Rescue Systems (TRS) was founded in 1986 when owner, Steve Fleming, recognized the need for top quality hands-on training for many rescue, safety and working at height companies. During that time we have trained many organizations in both the government and private sectors, including but not limited to, communication tower, wind turbine, power distribution, mining, oil field industries and emergency services. Our worldwide training has shared information and skills with a reputation built on integrity, respect and trust.

#### **Standards and Advisory Boards**

Our founder is on, and has been on several national standard writing committees including NFPA 1983, NFPA 1670 and ANSI 10.48. We are currently serving on several other types of safety and education committees and advisory boards in order to keep Technical Rescue Systems on the cutting edge and up-to-date with many of the national standards and industry interests.

#### **Learning Environment**

Technical Rescue Systems understands the very best environment conducive for learning is to actually DO IT. Our trainers understand both the team and teamwork / crew concept and by the end of our training time together we feel like a family... "We ALL have a lot to go home to". That is why our training philosophy and experiences know how tower climbers learn best – "Actually Do It"... that's why our training is up to 70% hands-on. Two years ago we acquired our training facility with offices, classroom and a 100' training tower on site right out our classroom door.

#### **Staff**

We employ a staff of experienced tower climbers, firefighters and other emergency services professionals with real world experiences in safety, fall protection, rope access and rope rescue. All of who have been either professional tower climbers, at height rope access professionals and rescuers and who have actually performed or been involved in real time rescues and emergency situations. Therefore our instructors understand and train our students with a unique perspective which incorporates problem solving situations and solutions to real life rescue situations.

We pride ourselves on continuing to offer yet another service, 24 / 7 contact

availability with our instructors, which offers continuous service to help answer specific industry related questions you, may have ... anytime.

### **Equipment Sales**

For years Technical Rescue Systems maintained the philosophy of not selling equipment in regard for appearing to be sponsored or sanctioned by any one equipment company, however, after training 1000's of students there was a consistent inquiry that the students / companies have the need for high quality fall protection and rescue equipment. We have always allowed climbers to train using their own equipment (that passes our TRS trainers inspection) and/or we offer students the use of many different high quality brands of equipment available at our training site.

As of January 2014 Technical Rescue Systems has coordinated efforts and agreements with several vendors. We now are able to offer a large amount of high quality personal protective, fall protection and rescue equipment to our students and clients at a discounted rate.
